

Features & Benefits

Custom-Fabricated to
Match Any Bolt Pattern and
Discharge Configuration

Shrouded Discharge Inserts

When conveying bulk materials, many screw conveyors are designed with multiple discharge outlets for flexibility. However, unused outlets can lead to bulk material buildup, leakage, or contamination. KWS Shrouded Discharge Inserts provide a simple and effective way to “plug” unwanted discharge outlets. Each insert completely encapsulates the trough interior, restoring a smooth curved cross-section and ensuring efficient, continuous conveying with no dead zones or hang-up points.

Features

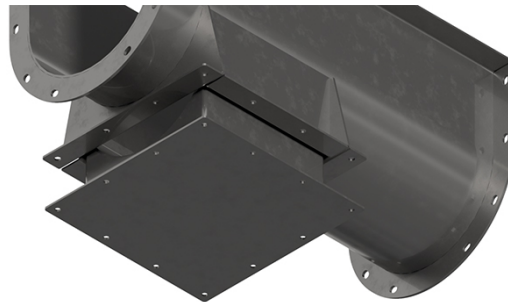

Custom Fit Design – Custom-fabricated to match any bolt pattern and discharge flange configuration.

Flush Shroud Construction – Contoured to match the inside diameter of the trough.

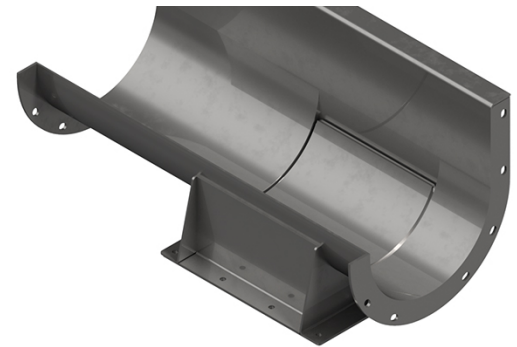

Benefits

Downtime Avoidance – Bulk material voids and buildup are prevented, and consistent bulk material flow is maintained.

Dust-Tight Seal – Bolted design completely seals off unused discharge outlet, preventing leakage and maintaining a clean, safe operation.
